DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 – 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 8+, the phrase “including header detection means (HDC) connected to said input and routing means (RTC) connected to said input, to said plurality of outlets and controlled by said header detection means” is indefinite. Also, in claim 9, “said input and routing means (RTC)” lacks antecedent basis. In claim 5, lines 6+, “adapted to transmitted or not to said output” is indefinite.

DETAILED ACTION

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 – 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,289,014 to Hoshino et al.

With regard to claim 1, Hoshino et al teach, in figure 9, a plurality of inputs and outputs, wherein cells with H bits in the header are input to header converter unit 141a,

Art Unit: 2661

The unit described in the abstract and illustrated more fully in figure 6 (front of patent) wherein header detection means 111/112/113 derives R-bit connection identifiers (tag portions) for the H bits in the header, R being smaller than H. See col 6, lines 38+, col 9 lines 35+, col 10 lines 40+, and the abstract. Note that the R-bits are used as replacement bits in the above cited passages, and further note that cells are transmitted. Further note member 114 in figure 9 which, in combination with switch 143 also in this figure, form the *obvious equivalent* of the routing means claimed in line 14. It is also noted that the replacement claimed in line 18 occurs in the header rewrite unit 114.

With regard to claim 2, member 114 is a header combination means coupled to members 111 and 143.

With regard to claim 3, see the conversion tables in figure 9.

With regard to claim 4, the system discussed above is ATM.

With regard to claim 5, see the carrier process means 142 in figure 9.

With regard to claims 6 – 7, note the conversion in members 142.
